

# KIDS WRITING BOARD WITH CALCULATOR

## MXWB-01

PINK - OEM0200487

BLUE - OEM0200488

Maxlife children's writing board with calculator is an educational tool that perfectly integrates learning and fun. Designed with children in mind, it enables effective consolidation and reinforcement of knowledge through interactive entertainment.

### Multifunctionality:

The whiteboard combines two key elements: An educational calculator and a space for writing, drawing and note-taking. This allows the child to intertwine math learning with creative self-expression.

### Educational calculator:

The built-in calculator offers logic exercises that engage a child's mind. The child can solve math tasks such as addition, subtraction, multiplication or division, facing the appropriate level of difficulty.

### Degrees of difficulty:

A choice of time to solve the task (5, 10 seconds or no timer) allows you to adjust the challenges to the child's abilities. The board provides a choice of 3 difficulty levels, allowing you to tailor the challenges to the student's ability and experience.

### Interactive learning:

The calculator has three puzzle games - tell the result of an operation, memorize the numbers or choose the larger number among others. This interactive learning method promotes understanding and consolidation of math concepts.

### Creativity and self-expression:

Next to the calculator, there is a space for writing, drawing and note-taking. The child is free to create drawings or notes. The dust-free cleaning function allows the board to be reused for new work.

### Ease of use:

The whiteboard is convenient and portable, ideal for math practice in cars, airplanes, travel. A great activity for kids to keep them engaged, entertained and learning.

### SPECIFICATION

|                       |                                   |
|-----------------------|-----------------------------------|
| <b>Brand:</b>         | Maxlife                           |
